

ABSTRACT OF THE DISCLOSURE (o

[0047] The present invention is a toy travel clock that comprises: an input device configured to accept an estimated time of travel between a starting<sup>50</sup> location and a destination<sup>52</sup>; a distance travel calculator configured to compute an estimated distance traveled; and an output device configured to display an indication of the estimated distance traveled. The toy travel clock graphically displays the starting location, the<sup>50</sup> destination, a hypothetical route connecting the starting location to the destination<sup>52</sup>, and the indication of the distance traveled along the hypothetical route.
